

Mechanical Edge of Dock Leveler Series

Mechanical Edge of Dock levelers are built for a rugged service life in demanding applications. "Easy-lift" activation reduces the manual effort required to position the edge of dock leveler. A torsion spring assembly provides operator assistance when cycling the edge of dock. The activating lever stores safely out of the way at the side of the deck, and is not prone to loss or theft. The Mechanical Edge of Dock is a safe and economical alternative to conventional dock levelers.

Features:

- Heavy-duty bumper blocks complete with molded rubber bumpers
- Grease fittings
- Rated capacities 20,000 or 25,000 lb

Description:

"Pentalever" Mechanical Edge of Dock levelers are built for a rugged service life in demanding applications. "Easy-lift" activation reduces the manual effort required to position the edge of dock leveler. A torsion spring assembly provides operator assistance when cycling the edge of dock. The activating lever stores safely out of the way at the side of the deck, and is not prone to loss or theft. The "Pentalever" Edge of Dock is a safe and economical alternative to conventional dock levelers. The design ensures trouble-free operation and a maximum return on investment. Lip hinge grease fittings are installed for ease of maintenance. The activating lever stores safely out of the way and is not prone to loss or theft. The operator lifts the activating lever straight up until it contacts the retaining bolt. In one simple motion, the lever is pulled back until the lip extension latch engages. The operator then pushes the handle forward to position the lip and deck assembly onto the bed of the truck/trailer. After the truck departs, the edge of dock automatically returns to the stored position.

Options:

- 2" high roll-off stop lip plate design
- Pour-in-place design
