

Elevating Docks

Elevating docks lifts (also known as dock lifts or elevating tables) are an excellent means of simplifying shipping and receiving functions and creating safer working conditions where loading docks don't exist.

Product Details:

Pentalift pit-mounted and low-profile elevating dock lifts provide an increased service range which will eliminate the potential of unsafe loading operations due to severe height differences between ground level and the truck/trailer bed.

Loading Dock Safety

Installation of an elevating dock lift is a safe and economical alternative to reconstructing the entire dock area. Safety is increased by allowing pallet trucks or carts to be used in conjunction with the lift to load and unload, this eliminates unsafe lifting practices.

Pentalift elevating docks are available in sizes and capacities to suit the most demanding applications.

Options:

- Stationary Elevating Dock Lifts
- Low Profile Elevating Dock Lifts
- LDL Elevating Dock Lifts

Engineering excellence, manufacturing quality, and built-in safety features make Pentalift the smart choice for elevating docks.
