

Polycarbonate Garage Doors

The main feature of the polycarbonate door - apart from its attractive appearance - is its lightweight, which results in easy operation with less stress on the related hardware components, and therefore less maintenance.

Product Details:

In addition to this, the translucent overhead doors are an excellent natural source of sunlight for virtually any application. By using a polycarbonate double-skinned sheet you are able to transmit up to 83% of available light while rejecting the extreme brightness and heat caused by the hot summer sun.

Doors are of extreme lightweight construction and positively weatherproof interlocked. Each panel consists of a 6063T6 aluminum alloy extruded frame with 16 mm (5/8") thick lightweight, smooth surface, translucent hollow-ribbed **SDP polycarbonate** panels.

Features:

For all types of industrial, commercial, agricultural, residential and institutional overhead doors. Particularly suited for service and maintenance garages where an attractive light-transmitting, strong and lightweight door is desired.

The unique feature of this door is the ability to screen out the undesirable summer heat and also retain the internal winter warmth adds up to tremendous energy savings.

Translucent polycarbonate sheet are available in clear, light bronze or dark bronze finish.

The unique combination of the light weight, energy efficiency, and aesthetic appeal, makes the use of a 'polycarbonate door' an attractive proposition.
