

LPR35 Vehicle Restraint Safety System

Vehicle restraints are a key part of an integrated loading dock safety system. Used as a stand-alone safety product or in conjunction with combination control panels, truck restraints lock trailers into position at the loading dock. A system of lights on the outside of the loading dock tells the driver when the vehicle is safely locked in or released.

Features:

- Heavy duty mounting plate
- Stepped hook arrangement provides dual locking positions
- Dual side by side hook arrangement effectively increases holding strength and retaining capacity
- Flood resistant, standard design and construction
- Hydraulic cylinder offers ultimate in reliability
- Heavy duty removable structural steel guard
- High visibility, two-way deluxe communication light system
- 35,000 lb restraining capacity
- Operational range of 8 3/4" to 26"
